

1-) title: entered data lost after automatic logout

description: all entered checkout data is lost after automatic logout, and the system does not restore or save user input

steps:

- 1- login
- 2- open checkout information
- 3- enter all required data
- 4- wait until logout happens
- 5- login again

expected result: data should be saved or user warned before loss

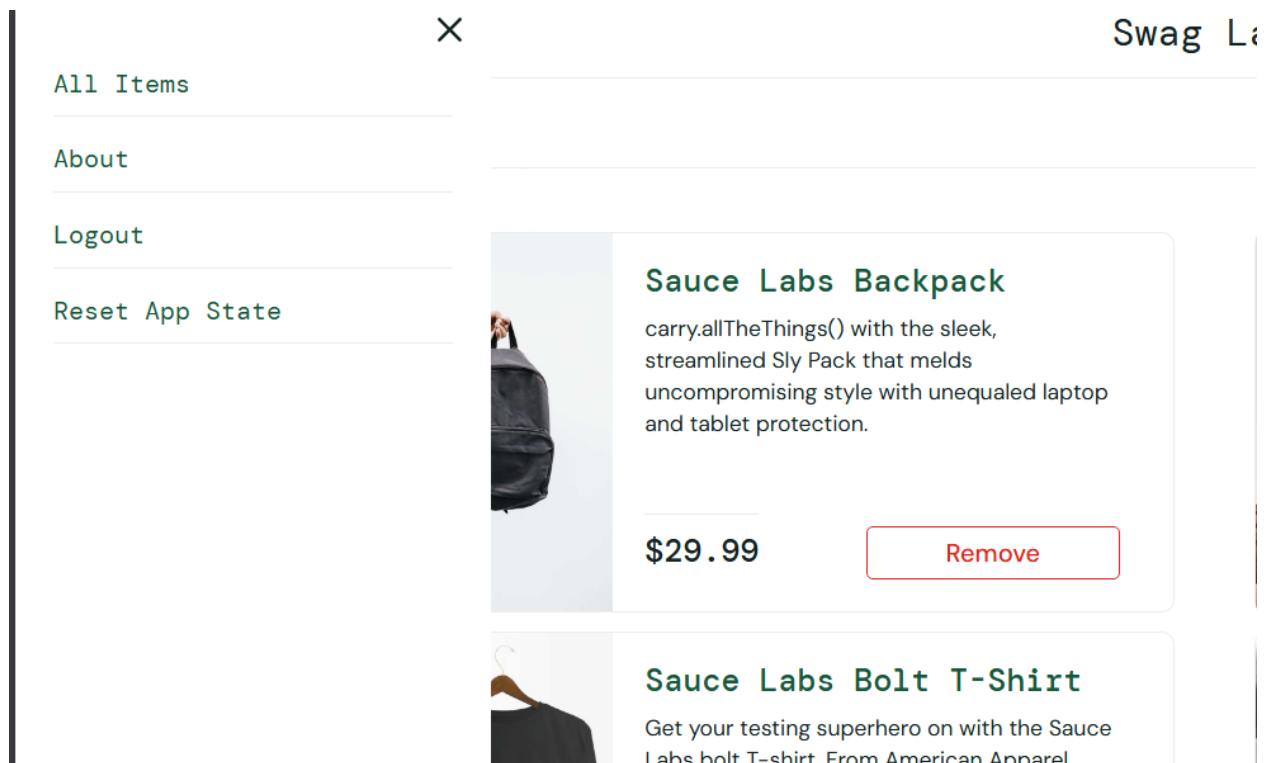

actual result: all data is lost

severity: high

priority: high

2-) title: dropdown list does not close when clicking outside

description: when the dropdown list is opened, clicking outside the list does not close it, which leads to poor user experience and inconsistent UI behavior

steps:

- 1- open the dropdown list
 - 2- click anywhere outside the dropdown area
- expected result:** dropdown list should close automatically
actual result: dropdown list remains open

severity: medium

priority: medium

3-) title: user gets logged out automatically during usage

description: the system logs out the user automatically after a short period of activity without clear reason or warning, which interrupts the user flow and affects usability

steps:

- 1- login to the system
 - 2- navigate through the website normally
 - 3- stay active for some time (not idle)
 - 4- continue using the system
- expected result:** user remains logged in while actively using the system
actual result: user gets logged out automatically

severity: high

priority: high

4-) Title: Hover effect not triggering consistently on UI element

Description:

When hovering over the dropdown/button element, the expected hover state (color change / shadow / cursor change) does not always appear, causing inconsistent UI feedback for the user.

Steps to Reproduce:

1. Open the application page.
2. Navigate to the target button / dropdown / icon.
3. Move the mouse pointer slowly over the element.
4. Observe the hover state behavior.
5. Repeat the hover multiple times or move in and out quickly.

Expected Result:

Element should consistently show hover effect (color change / highlight / pointer cursor) whenever the mouse is over it.

Actual Result:

Hover effect is inconsistent — sometimes it appears, sometimes it doesn't, especially when moving the cursor quickly or near the edges.

Severity: Low / Medium (depending on UI importance)

Priority: Medium

5-) title: cart allows extremely large number of items

description: no limit causes performance issues

steps:

1- add many items

expected result: limit or handled

actual result: lag

severity: medium

priority: medium

6-) title: no feedback after adding item

description: user does not get confirmation

steps:

1- click add

expected result: feedback

actual result: none

severity: low

priority: low
